

Introduction & Administrivia

Learning for Planning

WASP Relational Learning Course 2026

Jordan Thayer

May 18, 2026

Postdoctoral Researcher
Machine Reasoning Lab
Linköping University

- **Jordan Thayer** — Postdoctoral Researcher, Linköping University (MRLab) — heuristic search, learning guidance and control for planning
- **Dominik Drexler** — Postdoctoral Researcher, Linköping University (MRLab) — machine learning for scalable AI planning, generalized planning

What You Should Already Know

This course picks up after:

- **Session 1:** Domain-Independent Planning — PDDL, STRIPS, state-space search
- **Session 2:** ILP and Bayes Nets — inductive learning, relational features

We will call back to both, especially ILP-style feature definitions.

Two-Day Schedule

Day 1 — May 18

Time	Activity
1300–1310	Section 0: Introduction & Administrivia (Jordan)
1310–1430	Sections 1–2: Relational Learning + Temporal Abstractions (Dominik)
1430–1500	Fika
1500–1620	Section 3: Answer Set Programming for Planning (Jordan)
1620–1700	Project Work

Day 2 — May 19

Time	Activity
0900–1200	Project Work
1200–1300	Lunch
1300–1500	Discussion

Lecture slides:

https://github.com/mrlab-ai/wasp_asp_course

Lecture-companion notebook (Section 3 hands-on):

<https://github.com/mrlab-ai/wasp-asp-fundamentals>

Project notebook (Day 1 evening + Day 2 morning):

https://github.com/mrlab-ai/wasp_asp_exercise

The project repo contains:

- `wasp-unsolvability-classifier.ipynb`
- Pre-generated Spanner training data and feature CSV
- Helper code: scoring, baselines, train/test splits
